

Spectral shaping for biomedical and energy applications

November, 13-17, 2017/Tenerife, Canary Islands, Spain.

Tenerife (Canary Islands, Spain)

Conference Venue
Hotel Iberostar Anthelia (Costa Adeje, Tenerife)

“Spectral Shaping For Biomedical and Energy Applications” (SHIFT 2017) International Conference to be held in Tenerife, Canary Islands, Spain, this November.

On behalf of the organizing committee of [SHIFT 2017](http://SHIFT2017.com) we are contacting you to inform your company about the exhibiting possibilities at the International Conference next November in Tenerife! SHIFT2017 will provide an unparalleled forum for fruitful scientific discussions at an outstanding destination. Attendees will include representatives from industry, academia, and the government who share common objectives both at fundamental science and at commercial applications of various spectral-shaping materials and devices.

Undoubtedly, this is NOT another more conference in the calendar; our list of renowned confirmed invited speakers at the frontiers of renewal energy and biomedicine (and with the confirmation of above 100 participants so far) supports this assumption. At SHIFT2017 your company will also have the important opportunity to gain first-hand knowledge about special low tax zone and tax incentives to R+D that Canary Islands offers, as your delegates will be received and personally informed by Directors of our institutional sponsors, [ZEC \(Canary Islands Special Zone\)](http://ZEC.com), and also as a strategic logistic platform, [Canary Islands Hub](http://CanaryIslandsHub.com). Moreover you will be also able to meet some of our technology-based companies and scientific divisions at Canary Islands in the fields of photonics for imaging and biomedical applications like [IACTec](http://IACTec.com) and [Woopitx Inc](http://Woopitx.com) among others. Besides during our social program, you will also be able to visit important large scientific facilities at Tenerife like [ITER](http://ITER.com), Renewal Energy Institute of Tenerife, and the impressive [IAC](http://IAC.com), Astrophysics Institute of Canary Islands, located in [El Teide National Park](http://ElTeideNationalPark.com). Finally, we will have Conference lunch at [Parador Nacional de El Teide](http://ParadorNacionaldeElTeide.com).

We are convinced that SHIFT2017 is a strategic opportunity for your company to encourage international collaborations and synergies in a gathering with many relevant top-leading researchers in the luminescence and spectroscopy field. This includes a large number of contributions from Universities worldwide, from Stanford to Singapore.

Looking forward to meeting you in Tenerife next November

Dr. Jorge Méndez-Ramos

Universidad de La Laguna (Tenerife, Canary Islands, Spain)
